

DIRECT-TO-PATIENT SUPPLY MANAGEMENT

Signant SmartSignals RTSM solves the challenges of direct-to-patient medication provision by enabling at home medication provision, securely managing patient addresses, and integrating with leading clinical supply distribution partners to provide at-home delivery with full visibility to sites and patients. Our solution even provides the flexibility to choose between at-site and at-home medication provision at different visits, and to accommodate different country regulations and site preferences.

SIMPLIFY PATIENT PARTICIPATION

Provide patients with the ability to participate in your trial from the comfort of their own home.

IMPROVE SITE EFFICIENCY

Place orders directly in RTSM and reduce manual coordination of drug delivery. Plus, study teams can allow for differences in site preferences or country regulations by overriding configurations as needed.

PROVIDE FULL TRACEABILITY

Associated reporting provides full oversight and traceability for the investigator and sponsor, as well as tracking visibility for shipments that are on the way to patients or received.

ENABLED BY SMARTSIGNALS RTSM

ORDERING

Recipient details are entered into RTSM to securely submit orders directly to the logistics depot, warehouse, or central pharmacy.

TRACKING

Depot or central pharmacy receives encrypted shipping details from RTSM and provides status along the way.

OVERSIGHT

Courier confirmation of delivery and condition of the drug are integrated into RTSM for investigator oversight.
